

Active Frames

BlackBerry OS10's "Active Frames" – rebuilt, for any Android phone

Anyone who misses BlackBerry OS10 knows its home-screen "Active Frames": your most-recently-used apps as living tiles – top-left is the one you opened last, each showing the content of its latest notification (photo, cover, icon) and a red star when there is something new. **Active Frames** rebuilds that completely from scratch – all its own code, not a single line from any BlackBerry app, only open Android interfaces.

Android 10+

Tiles of your recently used apps

Size, columns and tile format freely adjustable

What's inside

- Resizable tile grid widget: columns, tile format (rectangular like the screen), count, larger top rows.
- BlackBerry order: top-left is the most recently used app.
- Red star for anything new; tile image from the latest notification, otherwise the app logo shown tile-sized.
- Optional real app photos (accessibility) – they stay on the device only.
- A second, native card for **EdgeTab** ("Widget 2") – scrolls reliably there.
